How to dump logs in case of an issue

1. Go to "Settings" -> "Integration Settings".
2. Check the option "Debug logging".
3. Reproduce or wait for the issue.
4. Disable the option "Debug logging" to save system resources, because logging is no more needed.
5. Open your SD-card, find the "DroidOnCar" folder, and send dump files from there to support@droidoncar.com, or to our [Telegram](#), or attach to an issue in [this](#) tracker.
